ON-DEMAND INFLATABLE PROTECTION and Void-Fill System

ORDER AND
CUSTOMER ADVICE

SMALL BUSINESS SYSTEM

On-demand inflatable product protection, available when and where it's needed at the push of a button, is helping small businesses move away from more traditional pre-inflated cushioning materials and air pillows as well as loosefill. By combining void-fill and damage reduction within the same easy-to-use system, NewAir I.B.® Nano saves space, time, and money for low-throughput operations.

EASY-TO-USE

The NewAir I.B.® Nano is similar to household appliances in its simplicity of use and electrical requirements. An intuitive touch panel provides start and stop buttons, along with other operational settings. The device plugs into an electrical socket, and, once switched on, is ready to use with a single touch.

SPACE SAVER

The system is lightweight and portable. Weighing just 11.3 kg, it can fit on to most tabletop surfaces and be moved when and where it's needed. The system inflates flat rolls of inflatable bubble film that require much less storage space than pre-inflated packaging materials or loosefill.

SHIP-FROM-STORE

No training is needed to set up and run the NewAir I.B.® Nano inflator. This makes it a good choice for ship-from-store operations where retail sales employees often have to pack online orders for shipping. The system offers a precise and consistent workflow and replaces the need to stockpile bulky packaging materials.
